

PROFESSIONAL OVERVIEW

Full Stack Software Engineer with over 5 years of end-to-end development experience building scalable applications across C#, .NET, Angular, React, and TypeScript. Specializes in engineering competitive, revenue-driving features and developing robust automated testing suites (Cypress, Playwright, Postman) to validate complex user stories and ensure production stability. A power user of advanced AI-assisted development workflows, combining rapid prototyping with resilient architecture to accelerate delivery, reduce manual testing by 70%, and drastically decrease regression bugs.

WORK EXPERIENCE

Hamilton Company – Reno, NV

Full Stack Software Engineer | **2022 – Present**

- Developed full-stack features for mission-critical laboratory software utilizing **C#, .NET, Angular, React, and Python**, delivering a robust, user-driven interface that facilitates precise robotic motion and automated liquid handling.
- Designed and launched a customer-facing API documentation portal utilizing **C#, .NET, React, and Python**. This enabled seamless, secure third-party integration with our proprietary endpoints, establishing a distinct competitive advantage that directly drove significant sales growth.
- Engineered comprehensive automated testing suites in **JavaScript** utilizing **Cypress, Playwright, and Postman** to validate complex, multi-step API workflows and full customer use cases.
- Spearheaded a code-first quality approach that slashed manual testing efforts by 70%, accelerated pre-release testing cycles from 10 days to 3 days, and decreased post-deployment regression bugs by ~40%.
- Mentored junior engineers and enforced strict coding standards through rigorous code reviews, refining object-oriented architecture and debugging complex system issues within a highly regulated environment.

Gaming Laboratories International – Las Vegas, NV

Test Engineer | **2021 – 2022**

- Engineered **Python** automation scripts across Windows and Linux environments to accelerate hardware and software validation, successfully meeting aggressive release deadlines during a period of critical understaffing.
- Executed rigorous white-box and black-box testing on complex gaming systems, including RNGs, slot machines, and server-driven distributed payouts by compiling proprietary customer codebases for in-house hardware deployment.
- Navigated highly strict federal, state, and tribal jurisdictional regulations to validate system compliance, meticulously executing comprehensive hardware/software checklists.
- Innovated team-wide testing protocols and trained incoming engineers, optimizing test processes to maintain high throughput and rigorous documentation standards despite surging workloads.

SKILLS

- **Languages:** C#, JavaScript, TypeScript, Python, C++, SQL.
- **Frontend Technologies:** React, Angular, HTML, CSS.
- **Backend & Frameworks:** .NET, ASP.NET Core, Node.js, Express, RESTful APIs.
- **Testing & Automation:** Playwright, Cypress, Selenium, Postman.
- **Cloud & DevOps:** Azure (App Services, Functions, Blob Storage, Entra ID), Azure DevOps, CI/CD, Git, Jira.
- **AI Development Workflows:** Cursor AI, Claude Code, GitHub Copilot, Model Context Protocol (MCP).
- **Practices & Architecture:** Object-Oriented Programming (OOP), Agile/Scrum, Clean Code, Code Review.

EDUCATION

- **B.S. in Computer Science and Engineering** University of Nevada, Reno (UNR)
